

Installation

When it comes to installing the app you need to clone the github-repo

(<https://github.com/mightoz/Discbuss.git>)

Dependencies

- Java SE 8 development environment
- Android SDK
- A (virtual) android device

SDK Targets

- Minimum SDK: 21
- Target SDK: 23

In order to run the application, the best way would be to install Android-Studio, import the recently cloned project using gradle and then either run the Android-Studio emulator or connect a android device to install to it.

Architecture

The application classes are sorted in different packages, such as “activities” for android activities, “application” for controllers containing the main functionality, “fragments” for android fragments, “net” for handling the bus API, and “util” for utility classes.
